

**TEXT:** *Differential Equations, Computing and Modeling*, by Edwards and Penney, Fourth Edition.

**DAILY WORK:** The exercises suggested below represent a minimal assignment. Some students may need to work additional exercises from the text to attain sufficient mastery of the material.

**PREREQUISITES:** Math 106, 107, and 208. You are expected to know differentiation and integration techniques and to be familiar with vector fields and parameterized curves.

**ACE OUTCOME 3:** This course satisfies ACE Outcome 3. You will apply mathematical reasoning and computations to draw conclusions, solve problems, and learn to check to see if your answer is reasonable. Your instructor will provide examples, you will discuss them in class, and you will practice with numerous homework problems. The exams will test how well you've mastered the material.

**NOTES:** The pace of the course, order of topics, number of exams, projects, quizzes, and number of assignments may be varied at the discretion of your instructor. Your grade in the course will be determined by your instructor, who will describe his/her grading policy in detail.

**EXAMS:** Examinations may, in part, test whether the student can apply concepts learned in the course to new situations; thus, problems appearing on the exams may not be exactly like exercises in the text.

**FINAL EXAM:** All Math 221 students are required to take a comprehensive final examination covering all the topics listed on this syllabus, barring a specific announcement to the contrary. **The final exam will be scheduled during the final exams week. Date, time, and room will be announced in advance.** You must arrange your personal and work schedules to allow you to take the exam at this scheduled time. Students with conflicting exam schedules may be permitted to take an alternate final exam AFTER the regularly scheduled exam.
