

Math 203: Contemporary Mathematics
Writing assignment 5
Assigned Wednesday, April 22; due Tuesday, April 28

For your final writing assignment, I'd like you to tell me what you thought of this class. Consider some of the following questions:

- What things did you enjoy about the way the class was organized? What things did you not enjoy?
- Which topics did you find most or least interesting or useful?
- How did this class compare to your expectations at the beginning of the semester?
- Has this class changed your outlook or opinion about mathematics? Has it changed the way you see things in the world?
- What suggestions would you make for me if I were to teach this class again in the future?
- Are there topics that you think should be added, removed, or changed? Do you think there is a better way to present some of the topics?
- What suggestions or advice would you give to future Math 203 students?

This writing assignment will be the very last thing I look at this semester, so your comments will not affect your grades on any other assignments or tests. I hope you feel free to make your honest opinions known. If you have an opinion or comment that you feel uncomfortable putting your name on, you can submit it anonymously, either through the official course evaluations that will be given in class on Thursday, April 23, or through the totally anonymous online feedback form at (<http://www.math.unl.edu/~s-bkell11/203-2009s/feedback.html>).
