

MATH 221, SECTIONS 1-6

SYLLABUS

FALL 2007

- TEXT:** *Differential Equations—Computing and Modeling* by Edwards and Penney, 3rd Ed.
- DAILY WORK:** The exercises suggested below represent a minimal assignment. Some students may have to work additional exercises from the text to attain sufficient mastery of the material.
- PREREQUISITES:** Math 106, 107, and 208. You are expected to know differentiation and integration techniques and to be familiar with vector fields and parameterized curves.
- NOTES:** The pace of the course, order of topics, number of exams, quizzes, and number of assignments and/or projects may be varied at the discretion of your instructor. Your grade in the course will be determined by your instructor, who will describe his/her grading policy in detail.
- EXAMS:** Examinations may, in part, test whether the student can apply concepts learned in the course to new situations; thus, problems appearing on the exams may not be exactly like exercises in the text.
- FINAL EXAM:** All Math 221 students are required to take a comprehensive final examination covering all the topics listed on this syllabus, barring specific announcements to the contrary. Your instructor will provide you the date, time, and place for your section's final exam. You should arrange your schedule accordingly. Alternate final exams are given only for extreme circumstances, and even then only AFTER the regularly scheduled final exam.
