

Sample Problems for Exam 2 ... and Beyond

1. Solve the following equations:

- (a) $[4]X = [120]$ in \mathbb{Z}_{28} ;
- (b) $[7]X = [120]$ in \mathbb{Z}_{20} ;
- (c) $[4]X = [70]$ in \mathbb{Z}_{33} ;
- (d) $[39]X = -[26]$ in \mathbb{Z}_{13} .

2. Is the set $\{m-1, 2m, 3m+1, \dots, m^2+m-2\}$ a complete set of representatives in \mathbb{Z}_m ? If yes, prove it.

3. Assume that if a is a divisor of zero and x_0 is a solution of the equation

$$ax_0 + b = c$$

in a commutative ring R . Find other solutions to this equation. Can you write down a formula for the general solution?

4. Show that in a commutative ring if a is a unit with inverse b , then $-a$ is a unit with inverse $-b$.

5. Show that a ring is commutative if and only if $a^2 - b^2 = (a + (-b)) \cdot (a + b)$ for every a and b .

6. Find all units and zero divisors in $\mathbb{Z}/14\mathbb{Z}$. For each unit find its order and its inverse.

7. What is the order of $[5]^{14}$ in \mathbb{Z}_{13} ? In \mathbb{Z}_{10} ?

8. In a commutative ring R denote by $U(a) = \{a \cdot u \mid u \in R, u \text{ is a unit}\}$, where $a \in R$. Show that if $a \in R$ is a unit then $U(a) = U(1)$. Show that $U(a) \cap U(1) = \emptyset$ if a is a zero divisor.

9. Find the order of $5 \pmod{12}$, and use this to find the least nonnegative integer in the congruence class $[65^{625}]_{12}$.

10. From Fermat's theorem deduce that, for any integer $n \geq 0$, $13 \mid 11^{12n+6} + 1$.

11. (a) Find the units digit of 3^{100} by the use of Fermat's theorem.

(b) For any integer a , verify that a^5 and a have the same units digit.

12. Prove that $2n^{11}/11 + n^6/2 + 7n/22$ is an integer for every natural number n .

MORE PROBLEMS (9C and beyond):

13. Use Euler's Theorem to evaluate $2^{100000} \pmod{77}$.

14. Show that for n an odd integer $\phi(2n) = \phi(n)$.

15. Solve the following system

$$\begin{cases} x \equiv 1 \pmod{9} \\ x \equiv 2 \pmod{11} \\ x \equiv 6 \pmod{13}. \end{cases}$$

16. Solve the equation $x^2 \equiv 1 \pmod{33}$.

17. Find an integer solution x which is simultaneously congruent to 17 mod 35 and to 4 mod 99.
Explain how you found x .
